

Java For Loop

[< Previous](#)[Next >](#)

Java For Loop

When you know exactly how many times you want to loop through a block of code, use the **for** loop instead of a **while** loop:

Syntax

[Get your own Java Server](#)

```
for (statement 1; statement 2; statement 3) {  
    // code block to be executed  
}
```

Statement 1 is executed (one time) before the execution of the code block.

Statement 2 defines the condition for executing the code block.

Statement 3 is executed (every time) after the code block has been executed.

Print Numbers

The example below will print the numbers 0 to 4:

Example

```
for (int i = 0; i < 5; i++) {  
    System.out.println(i);  
}
```

Example explained

- **Statement 1** sets a variable before the loop starts: `int i = 0`
- **Statement 2** defines the condition for the loop to run: `i < 5` . If the condition is true, the loop will run again; if it is false, the loop ends.
- **Statement 3** increases a value each time the code block has run: `i++`

Print Even Numbers

This example prints even values between 0 and 10:

Example

```
for (int i = 0; i <= 10; i = i + 2) {  
    System.out.println(i);  
}
```

Sum of Numbers

This example calculates the sum of numbers from 1 to 5:

Example

```
}  
System.out.println("Sum is " + sum);
```

[Try it Yourself »](#)

Countdown

This example prints a countdown from 5 to 1:

Example

```
for (int i = 5; i > 0; i--) {  
    System.out.println(i);  
}
```

For Loop With False Condition

Just like a **while** loop, a **for** loop may also never run. If the condition is **false** right from the start, the code inside the loop will be skipped entirely:

Example

```
for (int i = 10; i < 5; i++) {  
    System.out.println("This will never be printed");  
}
```

[Tutorials ▼](#)[References ▼](#)[Exercises ▼](#)[Sign In](#)[≡](#) [.](#) [CSS](#) [JAVASCRIPT](#) [SQL](#) [PYTHON](#) **[JAVA](#)** [PHP](#) [HOW TO](#) [W3.CSS](#) [C](#)

In this example, the loop starts with `i = 10`. The condition `i < 5` is already false, so the loop body is skipped, and nothing is printed.

Exercise [?]

Fill in the blanks to start a for loop.

```
(int i = 0; i < 5;      ) {  
System.out.println(i);  
}
```

`do` `while` `for` `loop` `i++` `i`
